

Hypercreative.

The brand manual

Creativity under pressure.

00

Hypercreative in one paragraph

Hypercreative is a creative-performance training system for high-stakes organizations: it teaches the people inside the world's most demanding companies to generate useful ideas on demand, under pressure, and on a deadline. The brand is premium, cinematic and sober — premium by subtraction. Its identity is built on a single disciplined gesture: the word "Hypercreative" set in Inter Medium, closed by one red dot, the ignition point. One name, one accent, one idea per view. Hypercreative is a trademark of Stormridge LLC, Sheridan, Wyoming, USA.

01

How to use this manual

This is the single source of truth for the Hypercreative brand. Read the brand essence first, then the rule you need; every spec here is enforceable, not advisory. When two paths look equally valid, pick the one that looks more disciplined and more restrained — that tie-breaker resolves most questions this manual does not name explicitly. When a situation truly is not covered, do not improvise a new rule: request a decision from brand governance (see the governance section) and default to the master files until you hear back. The manual is versioned; check the version stamp below before acting on a printed or forwarded copy, because an older PDF may carry retired rules.

MANUAL VERSION	v1.0
EFFECTIVE DATE	2026-06-19
SUPERSEDES	identidad-visual-v1.0 (retired) and all pre-2026 guidance
OWNER OF RECORD	Stormridge LLC (Wyoming, USA), brand governance
MASTER FILES LOCATION	hipercreative-method/04-identidad/ (vector lockups, fonts, devices)
STATUS OF THIS DOCUMENT	Canonical; overrides any earlier file, deck or print

Do	Don't
• Read brand essence and positioning before touching any asset. • Treat every numeric spec as a hard requirement, not a suggestion. • Confirm the version stamp before trusting any forwarded or printed copy. • When a case is not covered, ask governance and default to the master files. • When in doubt between two options, choose the more restrained one.	• Do not invent new rules, colors or fonts to fill a perceived gap. • Do not act on a screenshot of an old manual or a retired asset. • Do not treat 'not mentioned' as 'permitted' — escalate instead. • Do not mix rules from this version with rules from a prior version. • Do not ship anything that contradicts a spec in this document.

Litmus test for the whole system: does the work feel like the opening title card of a serious film, or like a busy ad? Aim for the title card, every time.

02

Brand essence & positioning

Hypercreative is the training system that makes creativity reliable when the stakes are highest. We do not sell inspiration; we install a repeatable method for producing useful ideas on demand, under pressure. Everything in this manual exists to protect one feeling: calm, expensive control. Read this section before touching any asset, because every rule downstream is in service of this positioning. When a decision is unclear, choose the option that looks more disciplined and more restrained, never the one that looks more energetic.

BRAND NAME	Hypercreative (one word, title case, English, every market)
TAGLINE	Creativity under pressure.
POSITIONING	Training the teams of the world's most demanding companies to create useful ideas on demand, under pressure.
DESIGN PHILOSOPHY	Premium by subtraction.
PERSONALITY	Premium, cinematic, sober
LEGAL OWNER	Stormridge LLC (Wyoming, USA)
SPANISH BOOK TITLE ONLY	Hipercreativo (book title, never a logo)

Do

- Write the brand name as Hypercreative, one word, title case, in English in every market and every language.
- Lead with restraint: when in doubt, remove an element rather than add one.
- Keep one idea, one message and one accent per view.
- Use Hipercreativo only as the title of the Spanish-language book, set in running text, never as a mark.
- Treat the red dot as the brand's signature — the ignition point that ends the word and the thought.

Don't

- Do not translate, abbreviate, hyphenate or split the name (no Hyper Creative, Hyper-Creative, HC, H/C).
- Do not write the name in all caps or all lowercase as a brand signature.
- Do not use Hipercreativo as a logo, wordmark, avatar, handle or product name.
- Do not make the brand look loud, playful or startup-casual; it is sober and cinematic.
- Do not add taglines, badges or sub-claims that dilute the single positioning.

Litmus test for any layout: does it feel like the opening title card of a serious film, or like a busy ad? Aim for the title card.

03

Logo & wordmark anatomy

The Hypercreative logo is a wordmark, not a lettermark or a logo-plus-symbol lockup. It is the single word 'Hypercreative' set in Inter Medium with tight tracking, immediately followed by a solid red dot — the ignition point. The dot is part of the logo, not punctuation you can drop. The wordmark is the only logo: no other wordmark exists, in any form. Construct it only from the master vector files; never re-typeset it by hand for a final asset. The trademark mark, when used, is a discreet Space Mono superscript placed once per surface on the most prominent wordmark.

WORDMARK TYPEFACE	Inter, weight 500 (Medium)
TRACKING	Approximately -0.015em (tight)
CASE	Title case: capital H, lowercase ypercreative
IGNITION DOT	Solid disc in Red #E0463C, immediately after the final 'e'
DOT DIAMETER	Equal to the lowercase x-height of the wordmark
DOT GAP	Space between word and dot $\approx$ one stem width (about 0.12 of the dot diameter)
TM MARK	Space Mono superscript, Ink-mute #9A988F, $\sim$ 0.28–0.34em of the wordmark
MASTER FILES	logo-positivo.svg / wordmark.svg (positive); logo-negativo.svg / wordmark-negativo.svg (reverse)

Do

- Build the wordmark from the supplied master SVG/vector files only.
- Keep the red dot tight to the final letter so it reads as the end of the word, not a separate object.
- Set the dot diameter equal to the wordmark's lowercase x-height.
- Place the TM once per surface, on the single most prominent wordmark only.
- Keep tracking tight and consistent; the wordmark should read as one compact unit.

Don't

- Do not re-create the wordmark in another weight of Inter or any other typeface.
- Do not remove, recolor or relocate the red dot — it is the mark, not optional punctuation.
- Do not loosen, justify or letter-space the wordmark.
- Do not add a second dot, a period, or any other punctuation after the dot.
- Do not put TM on every instance, in the footer, or on secondary wordmarks.

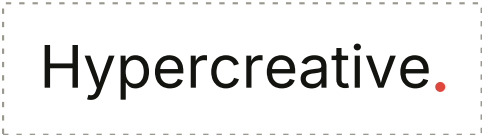

The Inter 500 weight lock and the typeface lock apply to the WORDMARK only; body and display text follow the typography system, which authorizes other Inter weights. RETIRED, now forbidden: the old serif (Fraunces) wordmark and the old uppercase letter-spaced 'HYPERCREATIVE' kicker used as a logo. Neither may appear on any asset.

04

Clear space & minimum sizes

The wordmark needs breathing room to read as premium. Define and protect a clear-space zone on every side, measured against the brand's own geometry so it scales correctly at any size. Never let copy, images, edges, folds or other logos intrude on this zone. Below the minimum sizes the wordmark loses legibility and the dot loses presence, so switch to the icon instead. There is exactly one clear-space unit; the old 'alternate' cap-height measure is withdrawn because it produced a different zone.

MINIMUM CLEAR SPACE = THE DOT DIAMETER ON EVERY SIDE

Hypercreative.

CLEAR SPACE UNIT (1D)	The diameter of the red dot, which equals the wordmark x-height. This is the ONLY unit.
MINIMUM CLEAR SPACE	1d on every side; prefer 2d in premium/cinematic layouts
WORDMARK MIN SIZE (SCREEN)	104px wide / cap height $\geq$ 12px
WORDMARK MIN SIZE (PRINT)	28mm wide / cap height $\geq$ 3mm
BARE DISC MIN SIZE (SCREEN)	16px
FULL IGNITION POINT MIN SIZE (SCREEN)	48px (below this, connectors thin out; do not use the full device under 48px)
IGNITION POINT DEGRADATION	$\leq$ 32px $\rightarrow$ bare disc only, connectors removed (see icon section)
BELOW WORDMARK MINIMUM	Use the disc / Ignition Point icon instead

Do

- Reserve at least 1d (one dot diameter) of clear space on all four sides of the wordmark.
- Increase clear space to 2d in spacious, cinematic hero and cover layouts.
- Switch to the icon whenever the wordmark would fall below its minimum size.
- Measure clear space from the outermost points of the wordmark including the dot.
- Keep page edges, gutters and folds outside the clear-space zone.

Don't

- Do not use the retired cap-height clear-space measure; 1d (dot diameter) is the only unit.
- Do not place text, rules, images or other logos inside the clear-space zone.
- Do not shrink the wordmark below 104px / 28mm wide.
- Do not crowd the wordmark even when space is tight — drop to the icon instead.
- Do not rely on a colored background to substitute for clear space.

Clear space is a minimum, not a target. In doubt, give the mark more room; this brand reads as premium because of the space around it.

05

Symbol, icon & the Ignition Point (construction)

The brand symbol is the solid red disc — the same dot that closes the wordmark, standing alone. Its expressive form is the Ignition Point: the disc plus three thin, asymmetric connectors caught mid-ignition, lifted directly from the website hero where nodes ignite red on scroll. Because this is the brand's single most expressive asset, its geometry is defined numerically here so it can be rebuilt without the master file if ever required. Use the Ignition Point for favicon, social avatar and the animated logo; it must degrade gracefully to the bare disc at small sizes so it never turns into mud.

CORE SYMBOL	Solid disc, Red #E0463C
DISC AS UNIT	Let R = disc radius. All connector geometry is expressed relative to R .
CONNECTOR COUNT	Exactly three, asymmetric (never two, never four, never radially symmetric)
CONNECTOR STROKE WEIGHT	0.12R (hairline), round cap, constant weight; never tapered
CONNECTOR LENGTHS	Asymmetric set: 1.6R, 2.4R and 3.2R measured from the disc edge
CONNECTOR ANGLES	Approx 22°, 140° and 255° around the disc — deliberately uneven, never evenly spaced at 120°
CONNECTOR GAP FROM DISC	0.15R clear gap between disc edge and the start of each connector
CONNECTOR TERMINALS	Each connector ends in a small node dot of radius 0.18R, same red
FULL-DEVICE MIN SIZE	48px; degrades to bare disc at ≤ 32 px
PRIMARY USES	Favicon, social avatar, animated logo, app icon
MASTER FILES	marca-punto.svg (full device avatar); favicon.svg + favicon-16/32.png + apple-touch-icon (disc only); logo-animated.svg

Do

- Use the bare disc as the default symbol and the Ignition Point as the expressive, large-format version.
- Drop to the bare disc at 32px and below, and for favicons and email.
- Keep the three connectors thin (0.12R), asymmetric and at the specified uneven angles.
- Rebuild from the numeric construction only as a last resort; the master file is always the first choice.
- Reserve the animated Ignition Point for hero, launch and avatar moments — not body content.

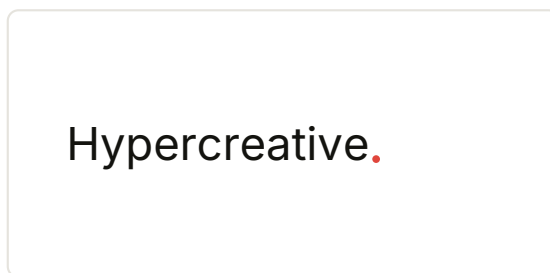

Don't

- Do not redraw the connectors as symmetric rays, a sunburst, a gear or a network web.
- Do not space the connectors evenly (no 120° symmetry) or add a fourth.
- Do not keep connectors visible below 48px, where they blur.
- Do not recolor the disc; the symbol is always Red #E0463C.
- Do not place the disc on a red or near-red background where it disappears.

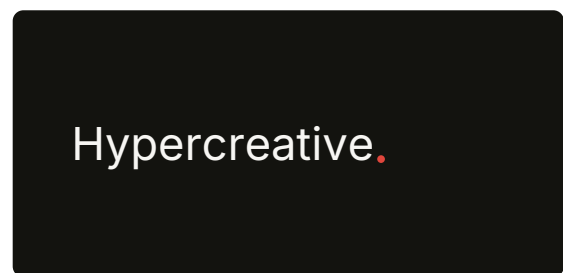

The Ignition Point is true to the product (ideas igniting under pressure), not decoration. The numeric construction exists so the asset is recoverable; for any final deliverable, default to marca-punto.svg.

Logo color versions & backgrounds

There are two logo states: positive (on light) and reverse (on dark). In both, the dot stays red — it is the one constant. The wordmark itself flips between Ink and Paper/white depending on the background. Choose the version by measuring background luminance, not by taste, and always preserve maximum contrast and the integrity of the red dot. The thresholds below make 'light' and 'dark' measurable so the choice is never by eye.

POSITIVE / ON LIGHT

REVERSE / ON DARK

POSITIVE (ON LIGHT)	Wordmark Ink #13130F, dot Red #E0463C
REVERSE (ON DARK)	Wordmark Paper #F7F6F3 / White #FFFFFF, dot Red #E0463C
USE POSITIVE WHEN	Background relative luminance ≥ 0.55 (CIE $L^* \geq 80$), e.g. Paper, White
USE REVERSE WHEN	Background relative luminance ≤ 0.18 (CIE $L^* \leq 35$), e.g. Ink and true near-black image areas
MID-TONE ZONE (FORBIDDEN)	Luminance between 0.18 and 0.55 — never place the logo; darken, lighten or scrim first
CONTRAST FLOOR	Wordmark must hit $\geq 4.5:1$ against its background in either state
APPROVED LIGHT BACKGROUNDS	Paper #F7F6F3, White #FFFFFF
APPROVED DARK BACKGROUNDS	Ink #13130F, or image areas measured at $L^* \leq 35$
ICON ON ANY BACKGROUND	Red disc / Ignition Point as-is (dot stays red); confirm disc $\geq 3:1$ vs background

Do

- Use the positive wordmark on Paper or White; use the reverse wordmark on Ink or measured near-black imagery.
- Keep the dot Red #E0463C in every version, positive and reverse.
- Measure background luminance (L^* or relative luminance) and confirm $\geq 4.5:1$ before placing the wordmark.
- Place the logo on calm, even areas of an image so it stays legible.
- Use the supplied reverse master file rather than manually inverting the positive one.

Don't

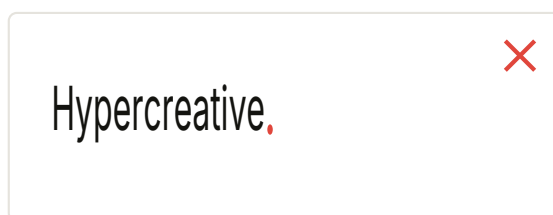

- Do not render the wordmark in red, or the dot in ink, white or any non-red color.
- Do not place the logo on any background in the mid-tone zone (L^* 35–80).
- Do not set the logo on busy, low-contrast or mid-tone photo areas.
- Do not use mid-gray, gradient or off-palette backgrounds behind the logo.
- Do not add a box, plate or drop shadow to force contrast — move or re-grade the background instead.

If a background sits in the forbidden mid-tone zone, darken it below L^* 35 or lighten it above L^* 80 (or add the cinematic scrim defined in the photography section) until one clean version reads. Never compromise the dot. See the logo-by-background decision tree in the quick reference.

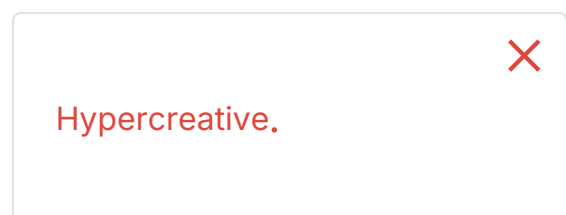

07

Logo misuse (with violation catalog)

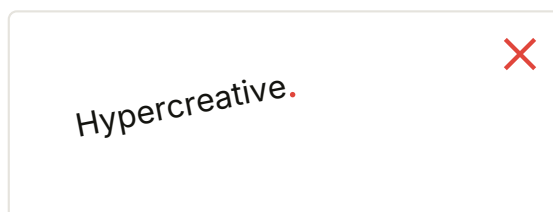

The wordmark is the brand's most valuable asset and the easiest to damage. The rules below are absolute; if an instance breaks any of them it is off-brand and must be replaced. Each rule maps to a numbered violation in the visual misuse catalog (see the master file misuse-catalog.svg / the misuse page of the print manual) so reviewers can name the exact defect they see. When you spot a violation in the wild, treat it as a defect to fix, not a variation to tolerate.

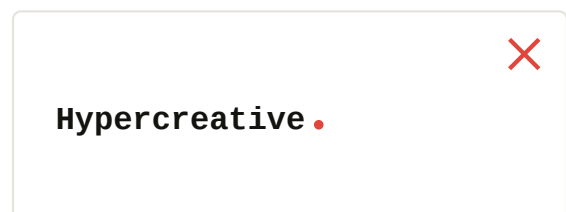

Don't stretch or condense

Don't recolor the wordmark

Don't rotate or angle

Don't change the typeface

ONLY TWO COLOR STATES	Positive (ink + red dot) and reverse (paper/white + red dot)
ONLY ONE TYPEFACE/WEIGHT	Inter 500 for the wordmark, always (applies to the wordmark only)
ONLY ONE DOT	Solid red, x-height diameter, immediately after the word
VISUAL CATALOG	misuse-catalog.svg — top 12 violations shown wrong-vs-right, numbered V01–V12

Do

- Reproduce the wordmark exactly from the master files at the locked proportions.
- Report and replace any off-brand or hand-built logo you encounter, citing its catalog number.
- Keep the wordmark horizontal and at 100% of its drawn proportions.
- Maintain the locked tracking, dot size and dot gap every time.

Don't

- V01 — Do not change the wordmark typeface or weight (no Bold, Light, italic, condensed or alternate Inter).
- V02 — Do not recolor the wordmark or the dot, or apply gradients, glows or textures.
- V03 — Do not stretch, condense, skew, rotate, arch or 3D-extrude the wordmark.
- V04 — Do not add a drop shadow, outline, stroke, bevel or container box.
- V05 — Do not resurrect the retired serif (Fraunces) wordmark.
- V06 — Do not resurrect the retired uppercase letter-spaced 'HYPERCREATIVE' kicker as a logo.
- V07 — Do not use any retired off-palette colors (#0B0B0C, #D8362A, #F5F3EE, #6B6B6B, #85847D) in or behind the logo.
- V08 — Do not reposition, resize or remove the dot, or replace it with another shape or an emoji.
- V09 — Do not letter-space, all-caps, lowercase or re-typeset the wordmark.
- V10 — Do not place the wordmark on busy imagery, red fields, or low-contrast (mid-tone) backgrounds.
- V11 — Do not lock other logos, taglines or icons directly against the wordmark (use the sanctioned co-branding construction instead).
- V12 — Do not put TM on more than one wordmark per surface, or color the TM red.

The violation catalog covers the twelve most common failures; it is intended to be exhaustive of what we see in practice, not a token sample. If a defect is not catalogued, it is still a defect — anything that alters the locked construction, color or typography is misuse. If you cannot tell whether something is allowed, it is not; default to the master files.

08

Co-branding & partner lockups

Because Hypercreative trains the teams of the world's most demanding companies, partner and client co-branding is inevitable: case studies, joint decks, certificates, 'in partnership with' surfaces. The misuse rules forbid locking another logo directly against the wordmark — this section gives the one sanctioned way to do it. The principle is parity and separation: the two marks are peers, divided by a hairline, never touching, never sharing the red. Hypercreative supplies one red event; the partner mark stays in its own correct colors but must not introduce a second competing red beside our dot.

CONSTRUCTION	Hypercreative wordmark — clear space — hairline divider — clear space — partner logo
DIVIDER RULE	Vertical hairline, Ink-mute #9A988F, height = wordmark cap height, single weight
OPTICAL WEIGHT	Scale the partner logo to equal OPTICAL weight (not literal height) with the wordmark
MINIMUM SEPARATION	$\geq 2d$ (two dot diameters) between each mark and the divider
LOCKUP ORDER	Host brand first: on Hypercreative surfaces, Hypercreative leads; on partner surfaces, partner leads
ENDORSEMENT LINE	'In partnership with' / 'Delivered with' set in Space Mono, Ink-mute, sentence case, above or below the lockup
RED DISCIPLINE	Only one red in the lockup — our dot. If the partner mark is red, render the lockup so the partner red is the view's single red event and keep our surrounding layout neutral
ORIENTATION	Horizontal lockup preferred; stacked lockup uses a horizontal hairline of equal logic

Do

- Separate the two marks with the hairline divider and at least 2d of clear space on each side.
- Balance the partner logo to equal optical weight, adjusting for its real visual mass.
- Lead with whichever brand owns the surface.
- Set any endorsement line in Space Mono, Ink-mute, sentence case.
- Keep partner logos in their own approved colors, supplied as official vector files.

Don't

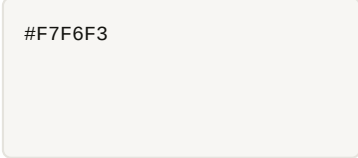

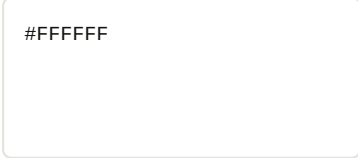

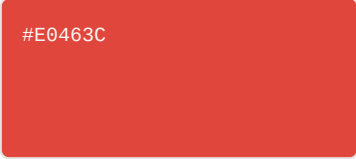

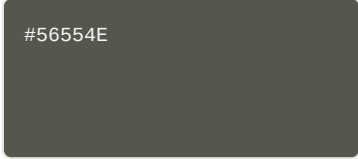

- Do not let the two marks touch, overlap or share a bounding box.
- Do not match literal heights when optical weights differ — balance by eye to parity.
- Do not recolor a partner logo into our palette, or our wordmark into theirs.
- Do not allow two reds in one lockup; resolve to a single red event.
- Do not build a lockup from a low-res or unofficial partner logo.

If a partner brand cannot be balanced without crowding the dot, give the lockup more clear space rather than shrinking our wordmark. When in doubt, route the lockup through governance for sign-off before it ships externally.

09

Color palette & the one-red-event rule

The palette is deliberately narrow: a warm neutral system of inks and papers, with a single red accent. Red is an event, not a color you decorate with. The governing law of the brand is one red event per view — a single deliberate moment of red on any given screen or page (most often the dot). Everything else is built from ink and paper. This scarcity is what makes the brand feel expensive and cinematic; spend red like it is rationed. Every color below is specified for screen and print so it reproduces on-brand on any substrate.

 #13130F	 #F7F6F3	 #FFFFFF
Ink Primary / text	Paper Surface	White Surface
 #E0463C	 #56554E	 #9A988F
Red Accent (one per view)	Ink-soft Secondary	Ink-mute Tertiary / labels

INK (PRIMARY)	HEX #13130F · RGB 19/19/15 · CMYK 70/64/72/76 · Pantone Black 6 C (nearest) — primary text and wordmark on light
PAPER	HEX #F7F6F3 · RGB 247/246/243 · CMYK 2/2/4/0 · uncoated warm white — primary background
WHITE	HEX #FFFFFF · RGB 255/255/255 · CMYK 0/0/0/0 — clean background / documents
RED (ACCENT)	HEX #E0463C · RGB 224/70/60 · CMYK 6/85/76/0 · Pantone 179 C (coated) / 178 U (uncoated) — the single accent; the dot; one red event per view
INK-SOFT (SECONDARY)	HEX #56554E · RGB 86/85/78 · CMYK 60/52/58/27 — secondary text
INK-MUTE (TERTIARY)	HEX #9A988F · RGB 154/152/143 · CMYK 41/35/42/3 — tertiary text, labels, folios, the TM
RED USAGE RULE (NUMERIC)	Exactly one red ELEMENT per view (count rule, not an area percentage). The old '~5%' area guidance is withdrawn.
CONTRAST — INK ON PAPER	≈ 15:1 (passes WCAG AAA)
COLOR PROFILES	Screen: sRGB IEC61966-2.1. Print: coated FOGRA39 / GRACoL; always proof Red against the Pantone chip
RETIRED COLORS (FORBIDDEN EVERYWHERE)	#0B0B0C, #D8362A, #F5F3EE, #6B6B6B, #85847D

Do

- Build every layout from Ink, Paper, White, Ink-soft and Ink-mute, then add exactly one red element.
- Reserve Red #E0463C for the single most important moment in a view (usually the dot).
- Use the Pantone match for any spot-color print and proof Red against the physical chip.
- Verify text contrast meets at least WCAG AA (4.5:1 body, 3:1 large) before shipping.
- Keep large areas calm and neutral so the one red event lands with full impact.

Don't

- Do not place more than one red element in a single view (no red headline plus red button plus red icon).
- Do not use red for body text, large fills, backgrounds or decorative blocks.
- Do not introduce any color outside the locked palette (no secondary brand colors, no gradients).
- Do not use any retired color: #0B0B0C, #D8362A, #F5F3EE, #6B6B6B or #85847D, anywhere.
- Do not let Red drift in CMYK — if it shifts orange or pink on press, return to the Pantone match.

The five retired colors (including the two grays #6B6B6B and #85847D) are forbidden everywhere, consistently with the logo-misuse catalog. The red rule is a COUNT, not an area: one red element per view. Accessibility floor: Ink-mute #9A988F on Paper is for large/tertiary labels only; see the accessibility section for the small-text exception that governs the TM. When a second accent feels

necessary, the answer is more negative space, not more color.

10

Typography system

Two typefaces, no exceptions. Inter carries all display and body text; Space Mono carries labels, folios, kickers and the TM. Headings are set in sentence case to keep the tone calm and human rather than shouty. The contrast between a clean grotesk and a precise monospace is the whole typographic personality — protect it by never adding a third face. Set type tight and confident at display sizes, comfortable and readable at body sizes. Note the scope: the wordmark is locked to a single Inter weight, but general text may use the full authorized weight range below.

DISPLAY & BODY	Inter (Regular 400, Medium 500, Semibold 600) — full range for general text
WORDMARK WEIGHT (SCOPED)	Inter 500 only — this single-weight lock applies to the WORDMARK, not body text
LABELS / FOLIOS / KICKERS / TM	Space Mono (Regular 400)
HEADING CASE	Sentence case
DISPLAY TRACKING	Tight, about -0.02em to -0.015em
BODY TRACKING	0 (default); body size 16–18px, line-height 1.5–1.65
LABEL/KICKER TREATMENT	Space Mono, small, Ink-mute, modest letter-spacing (~0.04em)
NUMERALS & PUNCTUATION	Oxford comma in lists; numerals 0–9 as figures (write out 'one' only inside the wordmark name rule)
THIRD TYPEFACE	Not permitted (Fraunces/Jost retired from the system, except the scoped book exception below)
SCOPED EXCEPTION — BOOK BODY	Fraunces is permitted ONLY for the Spanish book's long-form body text; never for the web, marks, decks or any other surface

Do	Don't
• Set all display and body text in Inter, and all labels, folios, kickers and the TM in Space Mono. • Write headings in sentence case. • Use Inter Regular/Medium/Semibold for general text, and Inter 500 specifically for the wordmark. • Use Space Mono sparingly and small, in Ink-mute, for metadata and kickers. • Keep body copy at 16–18px with generous line-height for readability.	• Do not introduce a third typeface anywhere outside the single scoped book-body exception. • Do not use Fraunces or Jost on the web, in decks, in marks, or for any non-book surface. • Do not set headings in all caps or Title Case as a system default. • Do not use Space Mono for body copy or long passages. • Do not substitute system fonts (Arial, Helvetica, Georgia) in shipped digital assets.

The Fraunces carve-out is a formal, scoped exception (Spanish book long-form body only), not a loophole — it never returns to the web or to any mark. Print/PDF fallback only: where Inter and Space Mono cannot embed, a Helvetica + Courier shell is the sanctioned technical stand-in, never a creative choice.

11

The red dot & accent usage

The red dot is the brand's heartbeat — the ignition point where an idea catches. It appears most often as the period closing the wordmark, but it can also act as the single accent in a layout: a list marker, a status node, the live element in the hero. Because it is also the one red event per view, you must choose where it lives deliberately. One screen, one red moment.

DEFAULT	ROLE	The ignition period closing the wordmark
EXTENDED	ROLES	Single accent: hero node, key list marker, one CTA emphasis, status dot
COLOR		Always Red #E0463C, solid, never tinted
QUANTITY		One red event per view
ANIMATION		May ignite once on load (Ignition Point), reduced-motion safe (see motion section)

Do

- Let the dot be the single red event in a view — choose its one location with intent.
- Keep the dot perfectly circular, solid and full-strength red.
- Use the dot as a precise accent (one marker, one node) when the wordmark is absent.
- Pair the dot with generous neutral space so it reads as deliberate.
- Animate the dot's ignition only once and gently, respecting reduced-motion.

Don't

- Do not scatter multiple red dots across one view.
- Do not tint, fade, outline or gradient the dot.
- Do not turn the dot into a bullet list of red markers down a page.
- Do not stretch it into an oval or replace it with a square or ring.
- Do not pulse, blink or loop the dot continuously.

If a layout seems to need two reds, it actually needs one red and more whitespace. The dot earns its power from scarcity.

12

Motion & the animated logo

Motion in this brand is rare, brief and decisive — an idea catching, not a UI toy. The only sanctioned brand animation is the Ignition: the Ignition Point disc lights and its three connectors draw on, once, on load. It is cinematic restraint in time: it happens, it settles, it stops. The numbers below make the single animated asset reproducible and accessible; nothing here loops, pulses or competes with content.

ASSET	logo-animated.svg (SVG+CSS) and logo-animated.lottie.json (Lottie export)
TRIGGER	Once on first load / first in-view; never on hover, scroll-loop or idle
TOTAL DURATION	900ms (disc 0–250ms ease-out; connectors draw 250–800ms; settle 800–900ms)
EASING	cubic-bezier(0.22, 1, 0.36, 1) (gentle ease-out); no bounce, no overshoot
END STATE	Static full Ignition Point; no loop, no residual motion
LOOP POLICY	None (loop count = 0); a single play per page load
EXPORT FRAME RATE	60fps for video/Lottie; SVG/CSS is frame-independent
REDUCED MOTION	prefers-reduced-motion: reduce → render the final static Ignition Point instantly, no animation

Do

- Play the Ignition once, on load or first view, then hold the static end state.
- Use the specified 900ms duration and gentle ease-out curve.
- Honor prefers-reduced-motion by jumping straight to the static mark.
- Reserve the animation for hero, launch and avatar moments.
- Export Lottie/video at 60fps and verify the end frame matches the static master.

Don't

- Do not loop, pulse, blink or autoplay the animation behind text.
- Do not add bounce, overshoot, spin or elastic easing.
- Do not trigger the Ignition on hover or repeatedly on scroll.
- Do not exceed ~1 second; brand motion is brief by rule.
- Do not animate any element red beyond the single dot/Ignition Point.

Motion follows the same scarcity law as color: one decisive moment, then stillness. If an interface feels like it needs more motion, it needs less.

13

Photography & imagery direction

Imagery is cinematic, sober and premium — the visual equivalent of a held breath before a high-stakes moment. Favor real environments, low-key lighting, deep negative space and a restrained, desaturated palette that lets the single red accent breathe. People are shown in focused, working states, never in stocky high-fives. Every image should look directed, not captured at random, and should leave room for the wordmark or a red moment to land. When no calm area exists for the logo, use the cinematic scrim specified here.

MOOD	Cinematic, calm, high-stakes, premium
LIGHTING	Low-key, directional, controlled; deep shadows acceptable
COLOR TREATMENT	Desaturated, neutral, warm-to-cool; red appears only as the brand accent
COMPOSITION	Generous negative space; clear area for logo or red event
LOGO SAFE ZONE (16:9 HERO)	Place the wordmark in the lower-left or lower-right third, within a region measured at $L^* \leq 35$ (reverse) or ≥ 80 (positive)
CINEMATIC SCRIM (FALLBACK)	When no calm area exists: linear gradient from Ink #13130F at 0% to transparent, 60% opacity at the logo edge fading to 0%, applied along the logo's side; never a flat box
SUBJECTS	Real people in focused work under pressure; real, considered spaces
ASPECT	Widescreen / cinematic crops favored for hero use

Do

- Shoot or select images with deep negative space for the wordmark and a single red moment.
- Use low-key, directional lighting and a restrained, desaturated grade.
- When no calm area exists, apply the cinematic scrim gradient (never a flat plate) to seat the logo.
- Show people genuinely concentrated, mid-work, under real pressure.
- Treat the frame like a film still: composed, intentional, quiet.

Don't

- Do not use bright, saturated, primary-colored or 'fun' stock photography.
- Do not introduce competing reds or rainbow color casts in imagery.
- Do not use clichéd business stock (handshakes, high-fives, lightbulbs, ladders to clouds).
- Do not clutter frames or fill every corner; protect the negative space.
- Do not apply heavy filters, vignettes-as-gimmick, or trendy color presets.

If an image already contains strong red, that red becomes the view's one red event — keep the dot/accent out of that view to avoid two reds competing.

14

Iconography, graphic devices & layout grid

The graphic system is austere and structural, echoing the document layout: hairline rules, a numbered left gutter, mono labels and the ignition node. Icons, when needed, are thin-line, geometric and uniform, never illustrative or filled with color. The recurring devices are the disc/node, the hairline rule and the numbered index — used to organize, not decorate. This section also dimensions the signature asymmetric grid, so the layout device is specified rather than merely named.

ICON STYLE	Thin-line, geometric, monoline, single-weight (1.5px at 24px artboard)
ICON COLOR	Ink or Ink-soft; never red except the one accent node
CORE DEVICES	Red node/disc, hairline rules, numbered left gutter (01, 02...)
INDEX NUMERALS	Space Mono; folio/index numerals may use red as the view's one red event
RULES	Hairline weight (0.5pt print / 1px screen), Ink-mute; short red rule allowed as the accent
GRID — PRINT/DOCUMENT	12-column asymmetric grid; left gutter column reserved for the numbered index + vertical hairline; outer margins $\geq 18\text{mm}$ (A4), gutter 5mm
GRID — WEB	12-column, max content width 1200px, 24px gutters, 72px section rhythm; left index rail on wide viewports
BASELINE GRID	8px baseline; all type and spacing snap to multiples of 8 (4px allowed for fine type lockups)
BREAKPOINTS	≥ 1200 desktop, 768–1199 tablet (index rail collapses), < 768 mobile (single column, index inline)

Do

- Keep icons monoline, geometric and consistent in weight.
- Use hairline rules and the numbered gutter to structure information.
- Lay out on the 12-column asymmetric grid and snap to the 8px baseline.
- Set index numerals and labels in Space Mono.
- Collapse the index rail gracefully at the defined breakpoints.

Don't

- Do not use filled, multicolor, gradient or 3D icons.
- Do not mix icon styles or weights within a system.
- Do not break the 8px baseline or improvise off-grid spacing.
- Do not color rules, icons or numerals red beyond the single allowed red event.
- Do not import third-party icon sets that clash with the monoline language.

When a device competes with the dot for attention, mute the device. The ignition node is always the visual priority.

15

Digital & UI application

Digital surfaces inherit every rule above and add platform specifics. The icon system, social crops, share images, interaction states and dark-mode tokens are defined here so a product or web team can build without guessing. The one-red-event law and the 8px baseline carry straight into UI: the red is almost always the single primary action or the live status node, never spread across the interface.

APP ICON GRID	Ignition Point centered on the disc; iOS 1024×1024 master (no transparency, Paper or Ink field), Android adaptive 108×108dp with 72dp safe zone, maskable safe area = inner 80%
FAVICON	Bare red disc on transparent/Paper; favicon.svg + 16/32 PNG + apple-touch-icon (disc only)
SOCIAL AVATAR	Full Ignition Point (marca-punto.svg); circle-crop safe area = inner 80% of the square; disc stays centered
OG / SHARE IMAGE	1200×630, Paper or Ink field, wordmark + Ignition Point + tagline, single red event, ≥ 2d clear space
BUTTONS	Primary = Ink fill / Paper text (or the single red CTA when red is the view's one event); Secondary = Ink hairline outline; radius 8px; min height 44px
LINK & FOCUS STATES	Links Ink underlined; hover Ink-soft; focus = 2px Red #E0463C outline offset 2px (focus is an allowed red moment for accessibility)
TAP TARGETS	Minimum 44×44px interactive area on all platforms
EMAIL SIGNATURE (HTML)	Wordmark PNG @2x (height 32px) + Space Mono name/title in Ink-soft; no animation, no tracking pixels in the mark; disc-only fallback for dark-mode clients
DARK-MODE TOKENS	bg #13130F, surface #1C1C18, text #F7F6F3, text-soft #9A988F, accent #E0463C (unchanged); reverse wordmark

Do

- Center the Ignition Point inside platform safe zones and test the maskable/circle crop.
- Keep the focus ring red and visible — accessibility focus is a sanctioned red moment.
- Use a single primary action per view; let it be the red event only when red isn't already spent.
- Build email signatures in inert HTML with a disc-only dark-mode fallback.
- Apply the dark-mode tokens wholesale; never half-invert a UI.

Don't

- Do not ship interactive targets smaller than 44×44px.
- Do not place the full Ignition Point where the circle/maskable crop clips the connectors.
- Do not scatter red across multiple buttons, links and badges in one view.
- Do not animate or add tracking imagery to an email signature.
- Do not invent dark-mode accent colors; Red #E0463C is unchanged in dark mode.

The accessibility focus ring is the one place red appears for a functional reason rather than a brand flourish; it still counts toward the one-red-event budget within its momentary state, which is acceptable because it is transient and user-triggered.

Brand applications — the brand in the wild

This is how the rules resolve into real surfaces. As a training company, our two signature deliverables are the keynote/slide template and the certificate of completion; both are specified here, alongside the everyday collateral. Every surface obeys the same laws: Paper or Ink field, sentence-case Inter, Space Mono labels and folios, the asymmetric grid, and exactly one red event — usually the dot or a single index numeral.

BUSINESS CARD	55×85mm, Paper, wordmark front (positive) with TM, Space Mono contact block in Ink-soft, single red dot; reverse = Ink field with bare red disc, one red event
LETTERHEAD	A4 Paper, wordmark top-left + short red rule under it, right-aligned Space Mono meta (KIND / DATE), justified Inter body, big mono folio bottom-left
EMAIL SIGNATURE	Per digital-ui spec: 32px wordmark @2x + Space Mono details, no animation
KEYNOTE / SLIDE TEMPLATE	16:9, Ink or Paper masters; Space Mono kicker + numbered index top-left, sentence-case Inter headline, one red event per slide; title card = wordmark + Ignition Point centered, big mono folio; section dividers use the numbered gutter
CERTIFICATE OF COMPLETION	A4 portrait or landscape, Paper, wordmark + TM top, recipient name in Inter Semibold sentence case, Space Mono metadata (program, date, signatory), one red dot as the seal/ignition mark, Stormridge LLC legal line in footer
SOCIAL POST TEMPLATE	1080×1350 / 1080×1080, Paper or Ink, Space Mono kicker, sentence-case Inter, single red event, ≥2d clear space around any wordmark
PRESENTATION TITLE CARD	Wordmark + Ignition Point centered on Ink, tagline in Space Mono Ink-mute below, single red dot
SIGNAGE / EVENT	Ink or Paper field, wordmark at scale with ≥2d clear space, one red event (often the bare disc as a wayfinding node)

Do

- Build the keynote and certificate from the master templates, not from scratch.
- Keep one red event per slide and per surface, usually the dot or one index numeral.
- Carry the numbered left gutter and Space Mono folios across decks and documents.
- Put the TM only on the most prominent wordmark of each surface (deck = title card; certificate = top wordmark).
- Include the Stormridge LLC legal line on certificates and formal documents.

Don't

- Do not add stock imagery, clip art or decorative color to slides or certificates.
- Do not let a deck accumulate multiple reds across one visible slide.
- Do not place the TM in footers or on every slide.
- Do not stray from the grid, the type system or the palette on any application.
- Do not design a new application type without checking governance for an approved construction.

If a needed surface is not specified here (merch, environmental, a new format), follow the nearest specified application, obey every core law, and confirm with governance before external release.

17

Merchandise & environmental application

A premium, sober brand training elite teams will produce physical artifacts: notebooks, name badges, apparel, event signage, printed certificates. On merch, the dot is often the only brand cue, so its reproduction must stay honest across single-color processes. The rule is fidelity over flourish: reproduce the disc cleanly, keep the one-red-event law, and never let a process turn the mark muddy or the red off-brand.

SINGLE-COLOR REPRODUCTION

Where only one ink/thread is available, use the wordmark in Ink (or Paper on dark) and OMIT the dot rather than render it in the wrong color; or run the disc alone as the brand cue

EMBROIDERY

Disc as a solid satin-stitch circle, minimum 8mm diameter; thread matched to Pantone 179 C; no connectors below 20mm overall

DEBOSS / EMBOSS

Wordmark or bare disc, blind (no ink) on Paper-toned stock; depth even, no fill

APPAREL

Wordmark small on chest or the bare red disc as a discreet cue; Ink or Paper garments only; one red event per garment

NAME BADGES

Paper field, wordmark top, Space Mono name/role in Ink-soft, single red dot

SUBSTRATE RULE

Matte, uncoated, tactile substrates preferred; no gloss, no metallic, no neon

RED ON MATERIAL

Always match Red to Pantone 179 C / 178 U; never approximate red by eye on fabric or vinyl

Do

- Match every physical red to the Pantone reference, not to a screen value.
- Use the bare disc as the single brand cue when only one color or tiny space is available.
- Keep embroidery at or above the stated minimums so the disc stays clean.
- Favor matte, tactile, premium substrates in Ink or Paper tones.
- Hold to one red event per physical object.

Don't

- Do not render the dot in any non-red thread or ink to 'make it work' in single color — omit it instead.
- Do not embroider the connectors below 20mm; drop to the bare disc.
- Do not use gloss, metallic, neon or novelty finishes.
- Do not let the red shift on fabric or vinyl; always Pantone-match.
- Do not crowd merch with multiple reds or competing marks.

Merch is where the brand is touched, literally. Premium by subtraction applies hardest here: one clean mark, one true red, excellent material — nothing else.

18

Naming, nomenclature & program architecture

The master name is locked; this section governs everything named beneath it. Hypercreative is a branded house: programs, courses, modules and events are descriptive sub-names that sit after the master wordmark, never new logos and never sub-brands with their own identities. The naming voice matches the brand voice — plain, confident, concrete. Avoid invented or hype names; prefer descriptive ones that a demanding buyer would say out loud without wincing.

ARCHITECTURE	Branded house: 'Hypercreative' + descriptive program/module name; no standalone sub-brand logos
PROGRAM NAMING PATTERN	Hypercreative [Descriptor] — e.g. Hypercreative Pressure Lab, Hypercreative Intensive, Hypercreative for Leaders
MODULE / SESSION NAMING	Sentence-case descriptive titles, Inter; numbered with Space Mono index (Module 01, 02...)
LOCKUP WITH PROGRAM NAME	Wordmark stays the mark; the program name is set as a Space Mono kicker or Inter subhead nearby, never fused into the wordmark
URLS	hypercreative.com, lowercase, no hyphens; program paths /pressure-lab; never the Spanish 'hiper-' in URLs
HANDLES	@hypercreative (or @hypercreativehq if taken), consistent across platforms; never abbreviations or 'hiper'
EMAIL ADDRESSES	name@hypercreative.com, lowercase, English spelling always
SPANISH BOOK	'Hipercreativo' is the ONLY Spanish form, and only as the book title — never a program name, URL or handle

Do

- Name programs descriptively after the master wordmark (Hypercreative + descriptor).
- Set program/module names in the brand type system, separate from the wordmark.
- Keep URLs, handles and emails in lowercase English 'hypercreative', no hyphens.
- Number modules with the Space Mono index for consistency with the layout system.
- Route any new program name through governance for a quick consistency check.

Don't

- Do not give a program its own logo, color or typeface — no sub-brands.
- Do not fuse a program name into the wordmark or add it as a permanent tagline.
- Do not use 'hiper', abbreviations or hyphens in URLs, handles or emails.
- Do not invent hype names; prefer plain descriptive ones.
- Do not let 'Hipercreativo' escape the Spanish-book context.

A demanding buyer trusts plain names. If a program name needs explaining, it is the wrong name — make it descriptive, not clever.

Voice & tone

Hypercreative speaks like a calm expert in a high-pressure room: precise, confident, economical. Short sentences. Concrete claims. No hype, no exclamation marks, no manufactured urgency. We sound like the smartest, steadiest person in the room — the one who lowers the temperature and raises the quality of thinking. The voice is constant; only the register shifts by context. Below is the lexicon, the grammar, before/after rewrites and a tone-shift matrix so anyone can write on-brand.

VOICE IN THREE WORDS	Precise, confident, economical
SENTENCE STYLE	Short. Concrete. One idea per sentence. Active voice.
WORDS WE USE	useful, on demand, under pressure, deadline, method, system, reliable, deliberate, install, practice, craft, signal
WORDS WE BAN	unleash, revolutionary, game-changer, magic, ninja/guru/rockstar, synergy, disrupt, 10x, hustle, !, ALL-CAPS shouting, emoji in formal copy
GRAMMAR CONVENTIONS	Sentence case headings; Oxford comma; numerals as figures (3, not three) except inside set phrases; one space after periods; no exclamation marks in formal copy
MESSAGING HIERARCHY	1) Useful ideas on demand, under pressure 2) A repeatable method, not inspiration 3) Built for the world's most demanding teams 4) Premium, sober, proven
BEFORE → AFTER (HYPE)	Before: 'Unleash your team's creative superpowers!' → After: 'Train your team to produce useful ideas on demand.'
BEFORE → AFTER (VAGUE)	Before: 'We help you think outside the box.' → After: 'We install a method for creating under pressure, on a deadline.'

Do

- Write short, concrete sentences in the active voice.
- Lead with usefulness and reliability, not inspiration or hype.
- Use the approved lexicon; cut every banned word.
- Keep headings sentence case and use the Oxford comma.
- Match the register to context using the tone-shift matrix below.

Don't

- Do not use exclamation marks, all-caps shouting, or emoji in formal copy.
- Do not use banned hype words (unleash, game-changer, ninja, disrupt, 10x...).
- Do not manufacture urgency or over-promise outcomes.
- Do not pad sentences; if a word can go, cut it.
- Do not switch the core voice — only the register shifts by surface.

Tone-shift matrix (register, not voice): Web/marketing = composed and assured, a little cinematic. Sales/proposal = direct, specific, evidence-led, zero hype. Error/system message = plain, calm,

helpful, never cute ('Something didn't save. Try again.'). Social = concise and dry, one idea per post, still no exclamation marks. In every register: precise, confident, economical.

20

Accessibility

Accessibility is part of looking premium, not a compromise to it. We hold WCAG 2.2 AA as the floor across digital surfaces, and we resolve the one place where a brand rule and an accessibility rule collide — the TM and small Ink-mute labels — explicitly, rather than by eye. Calm, high-contrast, generously spaced design is already most of the work; the rest is discipline.

CONTRAST FLOOR	Text $\geq 4.5:1$ (body) / $3:1$ (large $\geq 24\text{px}$ or 18.66px bold); non-text/UI $\geq 3:1$
INK-MUTE SMALL-TEXT RULE	Ink-mute #9A988F on Paper fails small-text contrast; for any READING text $\leq 18\text{px}$, promote to Ink-soft #56554E
TM EXEMPTION	The TM is decorative/legal, not reading text; it is EXEMPT from the small-text floor and stays Ink-mute (never red). This is the one named exception to the Ink-mute rule.
TAP TARGETS	Minimum $44 \times 44\text{px}$ interactive area
FOCUS VISIBLE	2px Red #E0463C focus ring, 2px offset, on every interactive element
MOTION	Honor prefers-reduced-motion: serve the static Ignition Point; no parallax or autoplaying motion that can't be paused
LOGO ALT TEXT	Wordmark: alt='Hypercreative'. Icon/favicon: alt='Hypercreative' (or empty alt='' if decorative beside the wordmark). Never alt='logo' or 'red dot'.
LABEL LEGIBILITY	Space Mono labels $\geq 11\text{px}$; if a label must read at $\leq 11\text{px}$ on Paper, use Ink-soft, not Ink-mute

Do

- Hold WCAG 2.2 AA as the minimum on all digital surfaces.
- Promote Ink-mute to Ink-soft for any reading text at small sizes.
- Give the wordmark meaningful alt text ('Hypercreative'), and decorative icons empty alt.
- Keep a visible red focus ring and 44px tap targets everywhere.
- Serve a static mark when reduced motion is requested.

Don't

- Do not set small reading text in Ink-mute on Paper.
- Do not promote the TM to Ink-soft or recolor it — it is exempt and stays Ink-mute.
- Do not use alt='logo', 'image' or 'red dot' for the mark.
- Do not remove focus outlines for aesthetics.
- Do not rely on color alone to carry meaning (the one red event must also be reinforced by position or label).

The collision is resolved cleanly: Ink-mute is fine for the TM and large decorative labels, and is upgraded to Ink-soft only where text must actually be READ at small sizes. When unsure whether text is 'reading text', treat it as reading text and use Ink-soft.

21

Localization & multi-script

The name is English in every market, but the materials around it are not. A company training the world's most demanding teams will publish in many languages, so localization is a first-class concern, not an afterthought. The brand frame (wordmark, palette, grid, devices) is constant everywhere; only body content localizes. Inter and Space Mono carry broad Latin, Cyrillic and Greek coverage; for scripts they do not cover, use the sanctioned fallbacks below rather than substituting a random system font.

NAME	'Hypercreative' stays English, title case, in every locale (only the Spanish book is 'Hipercreativo')
LATIN / CYRILLIC / GREEK	Inter + Space Mono cover these; use them directly
CJK FALLBACK	Body in Noto Sans CJK (matched weight to Inter Regular/Medium); wordmark stays Inter Latin, untranslated
ARABIC / HEBREW (RTL)	Body in Noto Sans Arabic / Noto Sans Hebrew; mirror the layout (gutter and index move to the right); the wordmark stays LTR and untranslated
HEADING CASE IN CASELESS SCRIPTS	Sentence-case rule applies only to cased scripts; in caseless scripts use size/weight, not case, for hierarchy
DEVANAGARI / THAI / OTHERS	Use the matching Noto Sans family at equivalent weight; keep Space Mono only for Latin/numeric labels
NUMBER & DATE FORMAT	Localize numerals, dates and currency to the locale; keep folios in Space Mono figures
TAGLINE TRANSLATION	May be translated in body context, but the English 'Creativity under pressure.' remains the canonical lockup form

Do

- Keep the wordmark English and untranslated in every market.
- Use the Noto Sans matched family for any script Inter doesn't cover.
- Mirror the asymmetric grid (index rail to the right) for RTL languages.
- Use size and weight for hierarchy in caseless scripts.
- Localize numerals, dates and currency to each locale.

Don't

- Do not translate or transliterate the wordmark (no localized logos).
- Do not substitute arbitrary system fonts for unsupported scripts — use the Noto match.
- Do not force the sentence-case rule onto caseless scripts.
- Do not leave RTL layouts un-mirrored.
- Do not let 'Hipercreativo' appear outside the Spanish book.

The frame is global, the content is local. If a script needs a fallback not listed here, choose the corresponding Noto Sans family and confirm with governance before publishing.

22

Trademark & legal usage

Hypercreative is a trademark of Stormridge LLC. Protecting the mark is part of using it well. This section operationalizes ownership: how the TM symbol behaves in running copy, the attribution line for body text, how the name must function grammatically, and how third parties may reproduce the mark. These rules protect the asset and keep our materials legally clean.

OWNER	Hypercreative is a trademark of Stormridge LLC, Sheridan, Wyoming, USA
ATTRIBUTION LINE (BODY/FOOTERS)	'Hypercreative is a trademark of Stormridge LLC.' — use in document footers, legal pages and credits
TM IN THE LOGO	Space Mono superscript, Ink-mute, once per surface on the most prominent wordmark (see logo anatomy)
TM IN BODY COPY	Mark the FIRST mention in a document with Hypercreative™; subsequent mentions plain. Do not TM every instance.
GRAMMATICAL USE	Always an adjective/proper noun: 'the Hypercreative method', 'a Hypercreative program'. Never a verb ('to hypercreative') or possessive of the mark ('Hypercreative's' as the brand acting is fine; do not pluralize the mark itself).
COPYRIGHT LINE	© [year] Stormridge LLC. All rights reserved.
SCHEMA / METADATA	legalName: 'Stormridge LLC'; brand: 'Hypercreative'
THIRD-PARTY / PRESS USE	Press and partners may reproduce the official wordmark from the master files only, unmodified, with required clear space; no recoloring, no redrawing, no lockups without approval

Do

- Include the attribution line in document footers, legal pages and credits.
- TM the first mention of Hypercreative in a document, then drop it.
- Use the name as a proper adjective/noun, never as a verb.
- Provide press and partners the official master files with usage rules.
- Use the full copyright + legalName in formal and structured contexts.

Don't

- Do not use Hypercreative as a verb or pluralize the mark.
- Do not TM every instance in body copy.
- Do not let third parties redraw, recolor or re-typeset the mark.
- Do not omit the Stormridge LLC attribution where ownership should be stated.
- Do not color the TM red or move it off the most prominent wordmark.

Ownership is operational, not decorative: the mark is an asset of Stormridge LLC and every reproduction — ours or a third party's — must come from the master files and follow these rules. Route any non-standard third-party request through governance.

The Spanish book — Hipercreativo

The book is the one place the Spanish form 'Hipercreativo' exists, and the one place Fraunces is allowed — both as scoped exceptions, not new brand directions. The book is a product OF Hypercreative, not a separate brand: its cover and system descend from the master identity, with a single, explicitly defined relaxation for long-form reading comfort. Everything outside the running body — cover, spine, title treatment, back matter — stays on the master system.

TITLE (THIS SURFACE ONLY)	'Hipercreativo' — set as a book title in Inter, sentence case; it is a title, never a logo or mark
BRAND RELATIONSHIP	A Hypercreative book; the master wordmark + dot appears on the cover and/or spine as the publisher/brand mark
COVER	Paper or Ink field, title in Inter, one red event (the dot or a single red rule); master wordmark present; no Fraunces on the cover
SPINE	Title in Inter + the bare red disc as the brand cue; author and master wordmark at the foot
TITLE TREATMENT	Sentence-case Inter display, tight tracking, generous margins; the red dot may close the title as the single red event
LONG-FORM BODY (SCOPED EXCEPTION)	Fraunces permitted for the book's running body text ONLY, for reading comfort; Space Mono still carries folios/labels
BACK COVER / COLOPHON	Master wordmark + TM (first/most-prominent only), Stormridge LLC legal line, one red event

Do

- Treat the book as a Hypercreative product carrying the master wordmark.
- Set the cover, spine and title in Inter on the master palette and grid.
- Use Fraunces only for the long-form running body inside the book.
- Keep the master wordmark + dot as the brand cue on cover and spine.
- Carry the TM and Stormridge legal line into the colophon.

Don't

- Do not turn 'Hipercreativo' into a logo, wordmark or mark.
- Do not use Fraunces on the cover, spine, or anywhere outside the running body.
- Do not give the book a separate color system or sub-brand identity.
- Do not let 'Hipercreativo' or Fraunces escape the book into web, decks or marks.
- Do not add a second red event to the cover or title.

The book exists to extend the brand into long-form reading, so it earns exactly one relaxation (Fraunces body) and one name relaxation (the Spanish title) — and nothing more. Both are formal, scoped exceptions consistent with the typography and naming sections.

Asset management, files & governance

A locked identity is only as strong as its file discipline. This section names the master files, the formats to use where, the naming convention, and who owns approvals. When the manual does not cover a case, this is the process that resolves it: ask the owner, default to the master files, and version the answer back into the manual. Nothing ships from a re-drawn or screenshotted asset.

MASTER FILES HOME	hipercreative-method/04-identidad/ — logos, fonts (_fonts/), devices, animation; web assets in 05-web/
FORMAT MATRIX	SVG = web/UI and any scalable use (default); PDF/EPS vector = print and partners; PNG = raster fallback, email, social raster; never JPEG for the logo
LOGO FILES	wordmark.svg / logo-positivo.svg (light); wordmark-negativo.svg / logo-negativo.svg (dark); marca-punto.svg (avatar device); favicon.svg + 16/32 PNG + apple-touch-icon; logo-animated.svg + .lottie.json
COLOR SPEC	Red #E0463C = RGB 224/70/60 / sRGB / Pantone 179 C (178 U) / CMYK 6/85/76/0; full breakdown in the color section
COLOR PROFILES	Screen sRGB IEC61966-2.1; print coated FOGRA39/GRACoL
NAMING CONVENTION	hypercreative_[asset]_[variant]_[size].[ext] — e.g. hypercreative_wordmark_reverse.svg, hypercreative_og_default_1200x630.png; lowercase, underscores, no spaces
APPROVALS OWNER	Brand governance on behalf of Stormridge LLC approves exceptions, new applications and third-party/partner use
REQUEST / EXCEPTION PROCESS	Need an asset or a case the manual doesn't cover? Request from governance, default to the master files meanwhile, and the decision is versioned back into this manual

Do

- Pull every asset from the master files; never re-draw or screenshot the mark.
- Use SVG by default, vector PDF/EPS for print, PNG only as a raster fallback.
- Name files with the lowercase underscore convention.
- Carry the correct color profile for screen vs print.
- Route exceptions and new applications through governance and version the outcome.

Don't

- Do not store or distribute the logo as JPEG.
- Do not let unofficial or forked copies of the assets circulate.
- Do not ship a new application type without an approved construction.
- Do not improvise file names; follow the convention.
- Do not treat a forwarded asset as canonical — verify it against the master files.

Governance, versioning and contact: this is manual v1.0, effective 2026-06-19, owned by Stormridge LLC; it supersedes all prior guidance. New decisions are folded back in as numbered versions with a changelog entry, so the manual stays the single source of truth.

25

Quick reference & decision aids

A one-page cheat sheet for fast, correct decisions. When you only have a minute, this is the page. Two decision tools resolve the most common judgment calls — which logo version to use, and where red is allowed to live — without guessing or 'measuring by eye'.

LOGO-VERSION DECISION TREE	Measure background luminance → $L^* \geq 80$: positive wordmark · $L^* \leq 35$: reverse wordmark · 35–80 (mid-tone): do not place; darken below 35, lighten above 80, or add the cinematic scrim · always confirm $\geq 4.5:1$
ONE-RED-EVENT DECISION	Is red already used in this view (image red, a red numeral, a red CTA)? Yes → no more red, including the dot. No → spend it on the single most important element, usually the dot.
WORDMARK OR ICON?	$\geq 104\text{px}$ wide / 28mm: wordmark · below that: Ignition Point ($\geq 48\text{px}$) · $\leq 32\text{px}$: bare disc
TYPE AT A GLANCE	Inter (body/display, sentence case) · Space Mono (labels/folios/kickers/TM) · no third face (book body Fraunces excepted)
PALETTE AT A GLANCE	Ink #13130F · Paper #F7F6F3 · White #FFFFFF · Ink-soft #56554E · Ink-mute #9A988F · Red #E0463C
RETIRED (NEVER USE)	#0B0B0C · #D8362A · #F5F3EE · #6B6B6B · #85847D · serif/Fraunces wordmark · all-caps letter-spaced kicker logo
TOP VIOLATIONS TO CATCH	Recolored dot · re-typeset wordmark · two reds in one view · TM on every instance · logo on mid-tone background · partner logo locked against the wordmark

Do

- Measure, don't guess: use the luminance thresholds for logo version.
- Count red before adding it: one event per view, full stop.
- Drop to the icon the moment the wordmark hits its minimum.
- Keep the cheat sheet visible during fast production.
- Escalate anything the cheat sheet and the manual don't resolve.

Don't

- Do not place the logo in the mid-tone luminance zone.
- Do not add a second red anywhere in a view.
- Do not use any retired color or any retired mark.
- Do not improvise when the decision trees give a clear answer.
- Do not skip the $\geq 4.5:1$ contrast confirmation.

Everything on this page is drawn from the full sections above; if the cheat sheet and a full section ever seem to disagree, the full section governs. When neither resolves a case, default to the master files and ask governance.

(c) 2026 Stormridge LLC. Hypercreative is a trademark of Stormridge LLC. Manual v1.0.
